Data Flow Diagrams and User Flows

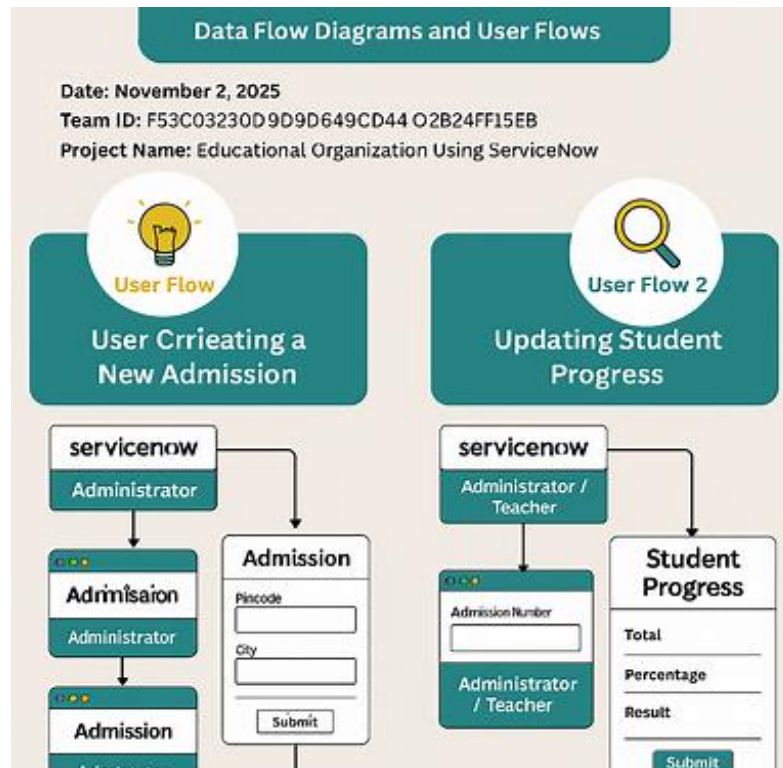

Date	November 2, 2025
Team ID	NM2025TMID00744
project Name	Educational organization using ServiceNow

User Flow 1: Creating a New Admission

1. **User:** Administrator
2. **Trigger:** A new student applies.
3. **Flow:**
 - Logs into ServiceNow.
 - Navigates to the "**Admission**" module in the "Salesforce" application.
 - Clicks the "**New**" button.
 - The "Admission" form loads. The "Admin Status" is "New".
 - Fills in Student Details (Name, Father's Name, etc.).
 - Selects a "**Pincode**".
 - **SYSTEM:** The onChange script triggers and auto-populates "City", "Mandal", and "District".
 - User fills in all other required fields.
 - User clicks "**Submit**".
 - **SYSTEM:** A new record is created with a unique "Admin Number" (e.g., SAL0000001).
 - The user is returned to the "Admission" list view.

User Flow 2: Updating Student Progress

1. **User:** Administrator / Teacher
2. **Trigger:** A student's marks for the term are available.

3. Flow:

- Logs into ServiceNow.
- Navigates to the **"Student Progress"** module.
- Clicks the **"New"** button.
- The "Student Progress" form loads. Total, Percentage, and Result fields are read-only.
- User clicks the search icon for the **"Admission Number"** field.
- User selects the correct student from the list.
- **SYSTEM:** The onChange script on "Admission Number" triggers and auto-populates the student's details (Name, Father's Name, etc.).
- User enters the marks for all subjects (Hindi, English, Maths, etc.).
- **SYSTEM:** With each entry, the onChange script on the subject fields triggers:
 1. The "Total Update" script runs, calculating the sum and setting the Total field.

2. The change in Total triggers the "Percentage Update" script, which calculates and sets the Percentage field.
3. The change in Percentage triggers the "Result Update" script, which sets the Result field to "Pass" or "Fail".

- User verifies the auto-calculated data.

User clicks "**Submit**".
