project Name	Educational organization using ServiceNow

Project: Educational Management System Using ServiceNow

Objective: To capture all initial ideas for streamlining administrative tasks in an educational organization.

Mind Map / Idea List:

1. **Central Idea:** Educational Management System

○ **Pain Points:**

- Manual data entry is slow and error-prone.
- Tracking student progress is difficult (spreadsheets, paper files).
- Admission process is cumbersome and hard to track.
- No central location for student data.

○ **Key Users:**

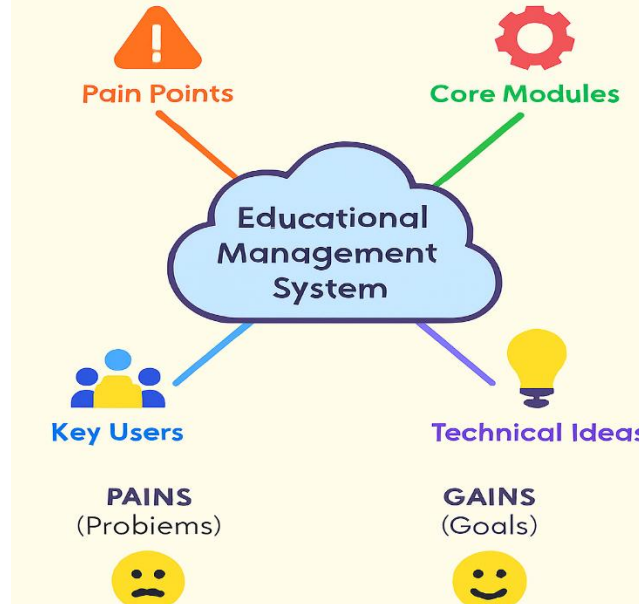

- School Administrators
- Teachers
- Admissions Officers

○ **Core Modules:**

▪ **Student Admissions:**

- Online application form.
- Track admission status (New, In Progress, Rejected, Joined).
- Auto-generate a unique Student ID.

BRAINSTORMING- IDEA GENERATION

- **Student Progress Tracking:**

- Record marks for different subjects (Maths, Science, English, etc.).
- Automatically calculate Total, Percentage, and Pass/Fail Result.
- Link progress report to a specific student.

- **Student Data Management:**

- Central table for all student details (Name, Father's Name, Address).
- Ability to see all related data (admissions, progress) in one place.

- **Technical Ideas (How to build in ServiceNow):**

- Use custom tables for Admissions and Progress.
- Use a "parent" table to hold common data (like Student Name).

- Use Client Scripts for auto-calculations (Total, Percentage).
- Use Client Scripts to auto-populate data (like Pincode -> City/District).
- Use Form Design to make forms easy to read (sections, 2-columns).
- Use a Process Flow bar on the Admission form to show the status.
