

Project Design Phase

Proposed solution

Date	November 2, 2025
Team ID	NM2025TMID00744
project Name	Educational organization using ServiceNow

1. Solution Title:

Educational Management System

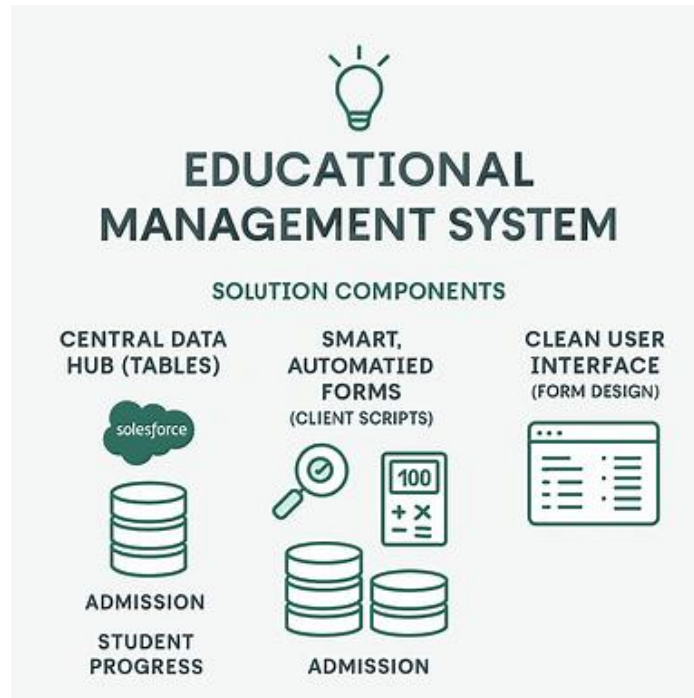

2. Executive Summary:

The Educational Management System is a custom ServiceNow application designed to solve the core inefficiencies of manual student administration. By leveraging custom tables, form automation, and client-side scripting, this solution provides a single, centralized platform for managing student admissions and academic progress, thereby reducing errors, saving time, and providing clear visibility into student data.

3. Solution Components:

- **Central Data Hub (Tables):**
 - A parent table Salesforce will store all core student data.
 - An Admission table will extend this parent table to manage the admission-specific data and workflow.
 - A Student Progress table will link to a student's record and store all academic performance data.
- **Smart, Automated Forms (Client Scripts):**
 - **Admission Form:** The admission form will feature auto-population for addresses based on pincode, reducing entry time. A visual process flow will guide admins through the admission stages.
 - **Student Progress Form:** This form will function as an automated calculator. When a teacher enters marks, the Total, Percentage, and Pass/Fail Result will

be calculated and displayed instantly. All calculation fields will be read-only to ensure data integrity.

-
- **Clean User Interface (Form Design):**
 - All forms will be organized with logical sections and multi-column layouts, transforming cluttered pages into clean, intuitive interfaces that are easy to read and use.
